

Apptricity®

At Apptricity, we never stop innovating. Together with Verizon as our sales partner we've brought large, global organizations together to create a new M2M solution that drives significant value in the field for Law Enforcement. **Apptricity** Field Services, is now becoming available for Law Enforcement.

Field Services for Law Enforcement makes patrol vehicles more intelligent by assuring equipment allocation solutions directly on location. The system integrates and streamlines asset, inventory and work order/dispatch management for start-to-finish tracking and control.

Tracking involved in moving inventory from the warehouse/storage to a patrol vehicle and associating that inventory with a dispatch order occurs automatically with real-time visibility. It's M2M, so no paper trail is required, eliminating tracking via spreadsheets and manual data entry. Reducing errors, shrinkage and waste.

Field Services for Law Enforcement includes a hardware backbone for interrogating radio frequency identification (RFID) tags. Vehicle-mounted antennae and readers detect RFID signals from tagged equipment. Records appear in real time.
